User Story Test Case Generator

About This Tool

This Test Case Generator helps QA engineers and developers automatically generate comprehensive test cases from Jira user stories. Connect to your Jira instance, select user stories, and let AI generate detailed test cases covering positive scenarios, negative scenarios, boundary conditions, and error handling. Export your test cases to Excel for easy integration with your testing workflow.

3. Submit the details for saving

4. Verify that an error message is displayed

5. Check that the details are not saved

Expected Result: The system displays an error message and does not save the details

Test Case ID: TC_GEN_005

Title: Test failure scenario for masters others approval setup

Preconditions: User is logged in with an active account and has necessary permissions

Steps:

1. Navigate to Masters Others Approval Setup page

2. Enter required details for approval setup

3. Simulate a network failure during submission

4. Verify that an error message is displayed

5. Check that the setup is not saved

Expected Result: The system displays an error message and does not save the setup
